SUMMARY

DevOps engineer with 5+ years building and operating cloud-native infrastructure, including hands-on Microsoft Azure experience. Experienced across Azure Kubernetes Service (AKS), Azure DevOps, Azure Container Registry, Azure Monitor, and Microsoft Entra ID, with deep Kubernetes, Terraform, and GitOps (ArgoCD) expertise spanning Azure, AWS, GCP, and DigitalOcean. Strong track record in multi-cluster operations, CI/CD automation, and building cost-efficient, highly available platforms.

EXPERIENCE

Wird AI · Contract · Full-time

Dec 2024 – Present

DevOps Engineer

Remote

- Managed multiple Azure Kubernetes Service (AKS) clusters across multiple environments, using ArgoCD and an app-of-apps pattern for GitOps-based configuration and deployment.
- Built and maintained CI/CD pipelines in Azure DevOps and GitHub Actions, automating build, test, security scanning, and deployment to Azure environments.
- Provisioned and managed Azure infrastructure as code with Terraform, standardizing environments and enabling consistent, auditable delivery.
- Managed container images and registries with Azure Container Registry (ACR) and configured Azure networking for secure, reliable AKS workloads.
- Implemented observability and cost controls using Azure Monitor and Log Analytics, improving reliability and reducing cloud spend.

Naxmek Business S.R.L.

Nov 2024 – Feb 2026

DevOps Engineer

Santo Domingo, Dominican Republic · Remote

- Upgraded API versions across multiple Kubernetes clusters in several environments while maintaining uptime of critical business applications, resulting in lower billing costs.
- Monitored and resolved issues across hundreds of serverless functions, improving workflows and allowing developers to focus on critical tasks.
- Created and enhanced scripts to find and fix underlying issues with infrastructure and critical application workflows.
- Built multiple Terraform modules to manage and optimize the creation of resources needed at each stage of the development process, resulting in faster feature delivery.

ChicksGroup · Contract

Jan 2025 – Present

DevOps Engineer

Remote

- Led a phased Kubernetes migration from Amazon EKS to Azure Kubernetes Service (AKS) and ultimately to DigitalOcean Kubernetes (DOKS), re-platforming clusters and CI/CD pipelines across clouds with minimal downtime, and landing on a multi-regional DOKS deployment with Cloudflare load balancing (geo-steering) and ExternalDNS to serve users from the nearest region.
- Implemented database read/write splitting with geographic routing to NA and EU read replicas, reducing latency for globally distributed users.
- Configured Traefik ingress and CORS middleware, and built DDoS cost-protection automation to keep traffic spikes from driving runaway infrastructure costs.

- Built CI/CD pipelines with Azure DevOps and GitHub Actions, including migrating package registries from Cloudsmith to GitHub Packages.
- Administered HashiCorp Vault policies for per-user secret paths and UI access, strengthening secrets management and access control.

Lemontech · Full-time

Nov 2022 – May 2024

DevOps Engineer

Las Condes, Chile · Remote

- Transitioned thousands of manually created AWS resources and Kubernetes object definitions into Infrastructure as Code (IaC) with Terraform, following best practices and a GitOps model across multiple AWS accounts; standardized infrastructure management and drove broader IaC adoption.
- Migrated existing Kubernetes applications to Helm charts and adopted GitOps practices with ArgoCD for configuration management, enhancing deployment reliability and simplifying configuration updates.
- Designed and implemented tools and workflows to automate permissions management for sensitive resources (databases, AWS resources, internal tools), integrated into ChatOps for faster, secure, and auditable access with significantly reduced response times.
- Managed and optimized EKS clusters with automated scaling, upgrades, and monitoring; integrated CircleCI with EKS to streamline CI/CD pipelines, reducing deployment times and improving resilience.

Digital Human · Part-time

Jan 2021 – Oct 2024

DevOps Engineer / Back-End Developer

Santo Domingo, Dominican Republic · Remote

- Operated multi-cloud Kubernetes workloads across Azure and GCP from day one, running Azure Kubernetes Service (AKS) clusters, Azure DevOps CI/CD pipelines, Entra ID (Azure AD) access management, and Azure networking, storage, and VMs.
- Developed and optimized dynamic CI/CD pipelines for dozens of microservices, incorporating quality gates, automated code analysis, security scanning, and varied test suites; streamlined deployments while reducing errors and accelerating time-to-production.
- Deployed and maintained scalable Kubernetes clusters on GCP using Helm charts, custom controllers, and best practices, with automated workflows for scaling, upgrades, and rollback.
- Implemented fault-tolerant, auto-scaling infrastructure on GCP with Prometheus and Grafana monitoring and alerting, ensuring minimal downtime and quick incident recovery.
- Automated compliance checks and integrated security policies into CI/CD pipelines, enhancing system integrity while meeting regulatory requirements.

EDUCATION

Instituto Tecnológico de Santo Domingo (INTEC)

Bachelor's Degree in Software Engineering

SKILLS

Clouds: Azure, AWS, GCP, DigitalOcean

Languages: Golang, Python, JavaScript, TypeScript, SQL

Orchestration & IaC: Kubernetes (AKS, EKS, GKE, DOKS, k3s), Helm, Terraform, ArgoCD, FluxCD

CI/CD & Tools: Azure DevOps, GitHub Actions, Entra ID (Azure AD), Docker, Linux, Git, HashiCorp Vault, Cloudflare, Traefik

Observability: Azure Monitor, Prometheus, Grafana, Loki
